C:\WEBserver\htdocs\Symfony>php app/check.php ←[入力]

* * *

* Symfony requirements check *

* * *

* Configuration file used by PHP: C:\PHP\php.ini

** ATTENTION **

* The PHP CLI can use a different php.ini file

* than the one used with your web server.

* (especially on the Windows platform)

* To be on the safe side, please also launch the requirements check

* from your web server using the web/config.php script.

** Mandatory requirements **

OK PHP version must be at least 5.3.3 (5.4.29 installed)

OK PHP version must not be 5.3.16 as Symfony won't work properly with it

```

OK      Vendor libraries must be installed
OK      app/cache/ or var/cache/ directory must be writable
OK      app/logs/ or var/logs/ directory must be writable
OK      date.timezone setting must be set
OK      Configured default timezone "Asia/Tokyo" must be supported by your installation of PHP
OK      json_encode() must be available
OK      session_start() must be available
OK      ctype_alpha() must be available
OK      token_get_all() must be available
OK      simplexml_import_dom() must be available
OK      APC version must be at least 3.1.13 when using PHP 5.4
OK      detect_unicode must be disabled in php.ini
OK      PCRE extension must be available

```

**** Optional recommendations ****

```

OK      Requirements file should be up-to-date
OK      You should use at least PHP 5.3.4 due to PHP bug #52083 in earlier versions
OK      When using annotations you should have at least PHP 5.3.8 due to PHP bug #55156
OK      You should not use PHP 5.4.0 due to the PHP bug #61453
OK      When using the logout handler from the Symfony Security Component, you should have at least PHP 5.4.11 due to
PHP bug #63379 (as a workaround, you can also set invalidate_session to false in the security logout handler configurati
on)
OK      You should use PHP 5.3.18+ or PHP 5.4.8+ to always get nice error messages for fatal errors in the development
environment due to PHP bug #61767/#60909
OK      PCRE extension should be at least version 8.0 (8.32 installed)
OK      PHP-XML module should be installed
OK      mb_strlen() should be available
OK      iconv() should be available
OK      utf8_decode() should be available
OK      intl extension should be available
OK      intl extension should be correctly configured
OK      intl ICU version should be at least 4+
OK      a PHP accelerator should be installed
WARNING realpath_cache_size should be above 1024 in php.ini
Set "realpath_cache_size" to e.g. "1024" in php.ini* to improve performance on windows.
(注) ↑ 「php.ini」の「realpath_cache_size」コメントoff状態を有効にして、16000に変更すると良い(16kのままでは、OKとならない)

OK      short_open_tag should be disabled in php.ini
OK      magic_quotes_gpc should be disabled in php.ini
OK      register_globals should be disabled in php.ini
OK      session.auto_start should be disabled in php.ini
OK      PDO should be installed
OK      PDO should have some drivers installed (currently available: mysql, odbc, sqlite)

```
